Distributed User Interfaces Nov 23 2020 The recent advances in display technologies and mobile devices is having an important effect on the way users interact with all kinds of devices (computers, mobile devices, laptops, tablets, and so on). These are opening up new possibilities for interaction, including the distribution of the UI (User Interface) amongst different devices, and implies that the UI can be split and composed, moved, copied or cloned among devices running the same or different operating systems. These new ways of manipulating the UI are considered under the emerging topic of Distributed User Interfaces (DUIs). DUIs are concerned with the repartition of one of many elements from one or many user interfaces in order to support one or many users to carry out one or many tasks on one or many domains in one or many contexts of use – each context of use consisting of users, platforms, and environments. The 20 chapters in the book cover between them the state-of-the-art, the foundations, and original applications of DUIs. Case studies are also included, and the book culminates with a review of interesting and novel applications that implement DUIs in different scenarios.

The Fourth Industrial Revolution Nov 04 2021 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that

we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Structural Materials for Generation IV Nuclear Reactors May 30 2021 Operating at a high level of fuel efficiency, safety, proliferation-resistance, sustainability and cost, generation IV nuclear reactors promise enhanced features to an energy resource which is already seen as an outstanding source of reliable base load power. The performance and reliability of materials when subjected to the higher neutron doses and extremely corrosive higher temperature environments that will be found in generation IV nuclear reactors are essential areas of study, as key considerations for the successful development of generation IV reactors are suitable structural materials for both in-core and out-of-core applications. Structural Materials for Generation IV Nuclear Reactors explores the

current state-of-the art in these areas. Part One reviews the materials, requirements and challenges in generation IV systems. Part Two presents the core materials with chapters on irradiation resistant austenitic steels, ODS/FM steels and refractory metals amongst others. Part Three looks at out-of-core materials. *Structural Materials for Generation IV Nuclear Reactors* is an essential reference text for professional scientists, engineers and postgraduate researchers involved in the development of generation IV nuclear reactors. Introduces the higher neutron doses and extremely corrosive higher temperature environments that will be found in generation IV nuclear reactors and implications for structural materials Contains chapters on the key core and out-of-core materials, from steels to advanced micro-laminates Written by an expert in that particular area

Proceedings of the International Conference Engineering Innovations and Sustainable Development Oct 11 2019 This book contains contributions from the international conference "Engineering Innovations and Sustainable Development," organized by three Russian universities on June 17–18, 2021. By presenting international research on various sustainability issues, it includes topics such as current trends in industrial and agricultural development, innovations in the construction and transport sectors, problems concerning the financing of innovative activities and governmental support for innovations, and engineering competences and skills in the era of new technologies. It also covers the economic, environmental, and informational aspects of sustainable development in the

context of innovations. Finally, the book addresses theoretical and practical aspects by studying the phenomenon of sustainability and engineering development in terms of comparing international experiences. It provides significant value for scientists, teachers, and students of higher educational institutions, and specialists, who are researching sustainable development issues in the era of engineering innovations.

Principles of Efficient Information Management Jun 18 2020 The first edition of this book appeared in the Federal Republic of Germany in 1984. and in English translation as "Computer: A Challenge for Business Administration" in 1985. This book, which is a translation of the fourth German edition, has been comprehensively revised. As a result both the character and the expected audience of the book have changed, which is reflected in the alteration to the title. This book addresses itself to issues arising from the research areas of both information systems and computer science. Computer science departments are primarily concerned with the development of EDP techniques, and the business economics aspects remain largely ignored. The emphasis in information systems departments is placed on the investigation of the business economic impact of the use of already existing systems. This strongly empirical approach is accompanied by a disinclination to consider actual system design: this is considered the responsibility of the software houses. This partitioning, however, leaves untapped the considerable potential which could be realized by an interdisciplinary approach from computer science and business economics. An isolated approach neglects both the effects that business economics can have on the implementation of EDP techniques, and the structural impact of EDP on business economics.

Amazon Echo Dot (4th Generation) User Guide Jul 12 2022 The Ultimate Echo Dot (4th generation) User Guide/Manual Amazon's inaugural smart speaker is back with a whole new look, a built-in Zigbee smart hub, and more potential under its new 100 per cent recycled hood. You don't need an especially keen eye to realise that Amazon has started from scratch for this fourth-generation Echo. The cylinder design has gone, in favour of a Magic 8-Ball-esque sphere, and perhaps fittingly you can ask it any question you want - as long as it's plugged in to power and linked to your wi-fi. We raised an eyebrow when we first saw the new orb-like Echo, but Apple recently unveiled a bijou HomePod mini that looks much the same, and that's being taken quite seriously. To help you get your head around your new gadget, I've compiled all the information you'll need to get the most out of your new ECHO DOT. This book contains illustrations and images for easier understanding for both seniors and beginners. Autonomic Networks Dec 13 2019 As the Internet becomes larger and larger, and consequently more difficult to control and to manage, telecommunication operators, manufacturers and companies require tools to perform management and control tasks. A large number of tools coming from different areas have been proposed, but these are not sufficient to handle an evolving and dynamic environment. This book presents and explains all the techniques which integrate a certain level of intelligence (through intelligent software agents for example) in order to represent knowledge, take appropriate decisions, communicate with other entities and achieve a self-managing network.

Emerging Personal Wireless Communications Mar 28 2021 The growth of telecommunications has been largely based on mobile and data services in the past 10 years and the growth will continue. For instance, it is forecasted that after 2005 the mobile traffic turnover in Europe will exceed that of fixed telephone traffic and the penetration of Internet access through mobile will exceed that of fixed access. It is expected that the new value added services will be Internet-based and the IP traffic will outweigh the amount of traditional ISDN based telephone traffic. The transition from the existing telecommunications services to mobile and Internet based ones will change the service infrastructure as well as the customer and service management structures. In wireless communications there are several new standards being developed and implemented to improve the data transmission rate over radio channels, to combine both voice, packet data and multimedia services in the terminals and to improve the service quality and usability. Narrow band packet radio standards such as General Packet Radio Service (GPRS) and i-Mode are already operative and broadband IMT-2000 standards, also called as Third Generation (3G) Mobile, have been developed in Japan, Europe and US. At the same time Wireless LAN and Bluetooth technologies mature and provide short-range data access to terminal devices. The emerging new technologies create opportunities not only to incumbent teleoperators but also to new network operators, IT companies and new service and content providers.

End User Development Feb 13 2020 This book makes important aspects of the international discussion on End User Development (EUD) available to a broader audience. It offers a unique set of contributions from research institutes worldwide, addressing relevant issues and proposing original solutions. This broad look at the emerging paradigm of End-User Development will inspire every reader to appreciate its potential for the future. Indeed, the editors hope that readers – "end-users" - will themselves become developers.

NETWORKING 2008 Ad Hoc and Sensor Networks, Wireless Networks, Next

Generation Internet May 18 2020 General Chairs' Message Welcome to the proceedings of the 7th IFIP Networking Conference, which was held in Singapore during 5–9 May 2008. This was the first time that IFIP Networking Conference was held in Asia. An interesting program consisting of high-quality papers from researchers around the world was organized by the Program Chairs, Amitabha Das and Pung Hung Keng. There were a lot of opportunities for the participants to share their research and views. This was also a great opportunity for researchers and practitioners to network and we hope the friendship will continue beyond Singapore. The success of the conference is due to the hardwork of a lot of people. Our appreciation goes to the authors, who contributed to the conference through their presence and their high-quality research papers. Our sincere thanks to the Organizing Committee, who worked very hard handling the paper reviews, logistics, publication, financial matters, etc. to ensure that the conference ran smoothly. Special thanks to our committee members from overseas who helped us in publicizing the conference as well as providing valuable input and sharing their experiences with us. We would also like to thank the numerous paper reviewers for their effort and time.

Finally, we thank the sponsors and the local institutions, Nanyang Technological University and National University of Singapore, for lending their support to the conference.

Methods and Tools in User-Centred Design for Information Technology Dec 25 2020 This book is concerned with the development of human factors inputs to software design. The aim is to create products which match the requirements and characteristics of users and which offer usable user interfaces. The HUFIT project - Human Factors in Information Technology - was carried out within the European Strategic Programme for Research and Development in Information Technology (ESPRIT) with the objective of enhancing the quality of software design within the European Community. The variety of activities undertaken to achieve this goal are reflected in this book. It describes human factors knowledge and tools for integration in information technology supplier organisations.

Prototyping-Oriented Software Development Feb 07 2022 This book is intended for anyone who plans, designs and implements software systems, for anyone who is involved with quality assurance, and hence for anyone who is interested in the practicability of modern concepts, methods and tools in the software development process. The book aims at software engineers and at students with specialized interests in the area of software

engineering. The reader is expected to be familiar with the fundamental concepts of software engineering. In writing the book, the authors tap years of experience in industrial projects and research work in the development of methods and tools that support the software development process. Perhaps now more than ever, the buzzword "software crisis" serves to alert us that software systems are often error-prone, that significant difficulties arise in mastering complexity in the production of software systems, and that the acceptance and adequacy of software products is significantly lower than is the case with other technical products. The following goals have been suggested for the improvement of the software development process: • exact fulfillment of user requirements • increased reliability and robustness • greater modularity of both the development process and the product • simple and adequate operation, i. e. , better ergonomics • easy maintainability and extensibility • cost-effective portability • increased reusability of software components • reduced costs for production, operation and maintenance VI Preface Research and development work in the area of software engineering has increased dramatically in recent years.
