Behavior in Organizations, 8/e, by Shani and Lau, is a paperback text that takes a hands-on, experiential approach to organization behavior. The majority of the exercises, role-playing simulations, and cases were developed in and for management training workshops. The

cases themselves represent different industries and organizations around the globe with diverse size, product, service, and cultures. Instructors appreciate the multiple interactive teaching methods for each teaching module. Experiential methods provide a powerful stimulus for learning, growth, and change by helping participants focus on their own behaviors and reactions as data. The text begins with structured, less personal exercises that are readily recognized as relevant to human effectiveness in organizational settings. Personal growth and self-understanding activities are introduced later in the text, after students have had enough experience to become more comfortable and ready for them. We want them to understand the math facts they are being asked to memorize. Our goal is automaticity and understanding; without both, our children will never build the foundational skills needed to do more complex math. Whether you're introducing your students to basic math facts, reviewing facts, or providing intervention for struggling students, this book will provide

you with insights and activities to simplify this complex, but critical, component of math teaching.
