"The authors test whether poor households use cash transfers to invest in income generating activities that they otherwise would not have been able to do. Using data from a controlled randomized experiment, they find that transfers from the Oportunidades program to households in rural Mexico resulted in increased investment in micro-enterprise and agricultural activities. For each peso transferred, beneficiary households used 88 cents to purchase consumption goods and services, and invested the rest. The investments

improved the household's ability to generate income with an estimated rate of return of 17.55 percent, suggesting that these households were both liquidity and credit constrained. By investing transfers to raise income, beneficiary households were able to increase their consumption by 34 percent after five and a half years in the program. The results suggest that cash transfers to the poor may raise long-term living standards, which are maintained after program benefits end. "--World Bank web site.

Who are NHS middle managers? What do they do, and why and how do they do it? This book explores the daily realities of working life for middle managers in the UK's National Health Service during a time of radical change and disruption to the entire edifice of publicly-funded healthcare. It is an empirical critique of the movement towards a healthcare model based around HMO-type providers such as Kaiser Permanente and United Health. Although this model is well-known internationally, many believe it to be financially and ethically questionable, and often far from 'best practice' when it comes to patient care. Drawing on immersive ethnographic research based on four case studies – an Acute Hospital Trust, an Ambulance Trust, a Mental Health Trust, and a Primary Care Trust – this book provides an in-depth critical appraisal of the everyday experiences of a range of managers working in the NHS. It describes exactly what NHS managers do and explains how their roles are changing and the types of challenges they face. The analysis explains how many NHS junior and middle managers are themselves clinicians to some extent, with hybrid roles as simultaneously nurse and manager, midwife and manager, or paramedic and manager. While commonly working in 'back office' functions, NHS middle managers are also just as likely to be working very close to or actually on the front lines of patient care. Despite the problems they regularly face from organizational restructuring, cost control and demands for accountability, the authors demonstrate that NHS managers – in their various guises – play critical, yet undervalued, institutional roles. Depicting the darker sides of organizational change, this text is a sociological exploration of the daily struggle for work dignity of a complex, widely denigrated, and largely misunderstood group of public servants trying to do their best under extremely trying circumstances. It is essential reading for academics, students, and practitioners interested in health management and policy, organisational change, public sector management, and the NHS more broadly.
