**Manual on the Development and Use of FAO Specifications for Plant Protection Products Jan 16 2020** With this edition of the manual, FAO is establishing a new procedure for the development of pesticide specifications in a transparent manner. The specifications may be used to provide an international point of reference against which products can be judged, either for regulatory purposes or in commercial dealings, thereby helping to prevent the trading, sale and use of inferior products, and will contribute towards public and environmental safety throughout the world, especially in developing countries

INTRODUCTION 1-1.1 Purpose. This chapter provides a general history of the development of military diving operations. 1-1.2 Scope. This chapter outlines the hard work and dedication of a number of individuals who were pioneers in the development of diving technology. As with any endeavor, it is important to build on the discoveries of our predecessors and not repeat mistakes of the past. 1-1.3 Role of the U.S. Navy. The U.S. Navy is a leader in the development of modern diving and underwater operations. The general requirements of national defense and the specific requirements of underwater reconnaissance, demolition, ordnance disposal, construction, ship maintenance, search, rescue and salvage operations repeatedly give impetus to training and development. Navy diving is no longer**

**limited to tactical combat operations, wartime salvage, and submarine sinkings. Fleet diving has become increasingly important and diversified since World War II. A major part of the diving mission is inspecting and repairing naval vessels to minimize downtime and the need for dry-docking. Other aspects of fleet diving include recovering practice and research torpedoes, installing and repairing underwater electronic arrays, underwater construction, and locating and recovering downed aircraft.**

***Necessity and Proportionality in International Peace and Security Law Sep 04 2021 Necessity and proportionality hold a firm place in the international law governing the use of force by states, as well as in the law of armed conflict. However, the precise contours of these two requirements are uncertain and controversial. The aim of Necessity and Proportionality in International Peace and Security Law is to explore how necessity and proportionality manifest themselves in the modern world under the law governing the use of force and the law of armed conflict, and how they relate to each other. The book explores the ways in which necessity and proportionality are applied in practice and addresses pressing legal issues in the law on the use of force, including the controversial "unwilling and unable" test for the use of force in self-defense, drones and targeted killing, the application of this legal regime during civil war, and the need for further transparency in states' justification for the use of force in self-defense. The***

***analysis of the role of military necessity within the law of armed conflict on the modern battlefield focuses on the history and nature of the principle of military necessity, the proper application of the principle of proportionality, how commanders should account for mental harm in calculating proportionality, and the role artificial intelligence and autonomous weapons systems may play in proportionality analysis. The book concludes with a discussion of the potential role of proportionality in the law governing post-conflict contexts.***

**The Impact of Emerging Technologies on the Law of Armed Conflict Oct 25 2020 Emerging technologies have always played an important role in armed conflict. From the crossbow to cyber capabilities, technology that could be weaponized to create an advantage over an adversary has inevitably found its way into military arsenals for use in armed conflict. The weaponization of emerging technologies, however, raises challenging legal issues with respect to the law of armed conflict. As States continue to develop and exploit new technologies, how will the law of armed conflict address the use of these technologies on the battlefield? Is existing law sufficient to regulate new technologies, such as cyber capabilities, autonomous weapons systems, and artificial**

***intelligence? Have emerging technologies fundamentally altered the way we should understand concepts such as law-of-war precautions and the principle of distinction? How can we ensure compliance and accountability in light of technological advancement? This volume of the Lieber Studies explores these critical questions while highlighting the legal challenges--and opportunities--presented by the use of emerging technologies on the battlefield.***

***The Development and Principles of International Humanitarian Law Sep 23 2020*** The essays selected for the first part of this volume offer an insight into the development, as distinguished from the history, of international humanitarian law. The focus of the majority of the works reprinted here is on an analysis of the adequacy of the law as it stood at the time of the respective publication and in the light of existing contemporary armed conflicts and military operations. Thus, the reader is afforded an in-depth look at the early roots of international humanitarian law, the continuing relevance of that body of law despite advances in weapons technology and the efforts to progressively develop it. International humanitarian law's development cannot be considered in isolation from its principles. The essays selected for the second part of the volume deal with the two fundamental principles underlying all of international humanitarian law: humanity and military necessity.

**The articles on the principles of humanity include reflections on the famous Martens Clause, and the analyses of military necessity take no account of 'Kriegsraison'. Moreover, they offer proof of the customary character of the principle of distinction in land, air and naval warfare.**

**The Law of Armed Conflict Apr 30 2021 The Law of Armed Conflict provides a complete operational scenario and introduction to the operational organization of United States forces. The focus remains on United States law perspective, balanced with exposure to areas where the interpretation of its allied forces diverge. Jus ad bellum and jus in bello issues are addressed at length. The casebook comes to students with stunning authority. All of the authors are active or retired United States Army officers with more than 140 years of collective military operational experience among them. Several have experience in both legal and operational assignments as well. They deliver a comprehensive coverage of all aspects of the law of armed conflict, explaining the difference between law and policy in regulation of military operations.**
