The first rule of lockdown: Find a safe place to hide. Ava is having a really bad day. Her parents are getting divorced. She just had a big argument with her two best friends. And she forgot to charge her phone... again. To top it all off, while she is hiding out in the bathroom over lunch, the alarm goes off for a lockdown drill. Ava knows the rules. She has to get herself into a classroom, turn the ringer off on her phone, lock the door, and cover the windows. But all of the rooms have already been locked from the inside and there is no one in the halls. Pretty soon she realizes there is an intruder in the building. This isn't a drill. From the author of *From Me to You* and *House Arrest*, comes this timely book that explores both the effect of school lockdown drills and the relatable struggles of modern middle grade friendship. Examines chivalry in the context of the Middle Ages Learning to read may be the most complex cognitive operation that children are expected to master, and the latest research in cognitive development has offered important insights into how children succeed or fail at this task. *The Cognitive Development of Reading and Reading Comprehension* is a

multidisciplinary, evidence-based resource for teachers and researchers that examines reading comprehension from a cognitive development perspective, including the principal theories and methods used in the discipline. The book combines research into basic cognitive processes—genetics, perception, memory, executive functioning, and language—with an investigation of the effects that context and environment have on literacy outcomes, making clear how factors such as health, family life, community, policy, and ecology can influence children’s cognitive development. Two of America's most popular authorities on healthy eating and cooking join forces in this inspiring, easy-to-use cookbook. This is not a diet book. It is a lively guide to healthy cooking, day-by-day, packed with essential information and, above all, filled with enticing food. Andrew Weil, M.D.—author of the best-selling *Eating Well for Optimum Health*—brings to this perfect collaboration a comprehensive philosophy of nutrition grounded in science. Rosie Daley—acclaimed for her best-seller, *In the Kitchen with Rosie*—brings to it her innovative and highly flavorful spa cuisine. The recipes are eclectic, drawing from the healthy and delicious cooking of the Middle East, the Mediterranean, and Asia, among other cuisines. For starters, you might try Grilled Satay or a Miso Pâté; for soup, often a meal in itself, a hearty Mixed-Bean Minestrone Stew or a Roasted Winter Squash and Apple Soup with Cilantro Walnut Pesto; a special entrée could be the Savory Roasted Cornish Hens with Roasted Garlic or Baked Spicy Tofu with Bean Thread Noodles, Corn, and Mango; for a simple supper, Turkey Burgers or Portobello Burgers; and for the occasional indulgence, a dessert of Almond Fruit Tart or Peach and Blueberry Cobbler. Andy and Rosie do not always agree. When Rosie calls for chicken, Andy

offers a tofu alternative; she likes the flavor of coconut milk, whereas he prefers ground nut milk; when she makes a pastry with butter, he suggests using Spectrum Spread. There are no hard-and-fast rules. Lifelong health begins in the kitchen, so this is a lifestyle book as well as a cookbook. In it you will learn from Dr. Weil: • how to make use of nutritional information in everyday cooking • what is organic . . . and how to buy organic foods • the importance of reading labels and what to look for • sensible advice about eggs, milk, cheese, salt, spicy foods, wine, coffee • the facts about sugar and artificial sweeteners . . . and from Rosie: • how to get kids involved—from skinning almonds to layering lasagna • ways to have fun in the kitchen—creating scallion firecrackers and radish rosettes • low-fat and nondairy alternatives for those with special concerns • smart menu planning—letting the seasons be your guide . . . and lots more. This revolutionary book will change forever the way you cook for yourself and your family. With 58 photographs in full color.

City streets are perhaps the most paradoxically anonymous and personal of all public spaces in the city: people blindly collide in their rush to reach their destinations, while the homeless look for humanity amid the thousands passing by. Gary Stochl captures this daily drama in *On City Streets*, a penetrating examination of the unpredictable people, places, and events that make up the streets of downtown Chicago. It is a stunning collection made even more so by the fact that this is the first work of Stochl's to be seen in his forty years as a photographer. Until 2003, Stochl had never shown his photographs to anyone; his rich body of images remained completely unknown to the public. Self-taught and working in isolation, Stochl carefully studied the work of other renowned urban photographers, including Henri Cartier-Bresson and Robert Frank. Through his studies, he learned how to see

his subjects, and he developed a visual language uniquely his own, unfettered by fashion or community. The results of his efforts are these powerful images that provide a starkly honest and penetrating glimpse into the lives of city dwellers and their internal struggle with the loneliness of contemporary urban life. Like all great images, Stochl's photographs leave the viewer with an altered sense of the world. On City Streets offers, with unnerving directness and consistency, that rare artistic combination of visual sophistication and stunning emotional resonance. With this book, Stochl joins the ranks of Chicago's great photographers. This book explores the important role of the interferons in infections due to nonviral intracellular pathogens. It deals with the induction of interferons by a variety of intracellular microorganisms and the effects of interferons on the host cells and the microorganisms. A photography class—in a book! But while people are often well trained in the skill set of their particular profession, few people are ever taught how to lead. As such, those first steps into leadership can seem daunting – what do you actually do? How do you really lead? How do you build an effective team? And how do you lead colleagues who used to be your peers? *How to Lead Others* aims to convey the basics of leadership in a way that is concise, relevant and practical by breaking down leadership into eight simple lessons: · Defining the task; · Effective planning; · Briefing; · Controlling; · Motivating; · Organizing; · Evaluating; and · Leading by example. Aimed at those who, regardless of industry or business sector, are about take their first steps on the leadership path, or who are at an early stage in their career and realise that leadership responsibilities lie ahead of them, *How to Lead Others* is the essential handbook to one of the most important and challenging aspects of professional life. The Complete Idiot's Guide to Motorcycles, Fourth Edition, is the most complete book on motorcycles, covering everything from how to choose and maintain a motorcycle and how to buy appropriate gear, to how to ride safely, and how to make the most out of trips on the open road. In the years after World War I, the defeated and much-reduced German Army developed new clothing and personal equipment that drew upon the lessons learned in the trenches. In place of the wide variety of uniforms and insignia that had been worn by the Imperial German Army, a standardized approach was followed, culminating in the uniform items introduced in the 1930s as the Nazi Party came to shape every aspect of German national life. The outbreak of war in 1939 prompted further adaptations and simplifications of uniforms and insignia, while the increasing use of camouflaged items and the accelerated pace of weapons development led to the appearance of new clothing and personal equipment. Medals and awards increased in number as the war went on, with grades being added for existing awards and new decorations introduced to reflect battlefield feats. Specialists such as mountain troops, tank crews and combat engineers were issued distinctive uniform items and kit, while the ever-expanding variety of fronts on which the German Army fought – from the North African desert to the Russian steppe – prompted the rapid development of clothing and equipment for different climates and conditions. In addition, severe shortages of raw materials and the demands of clothing and equipping an army that numbered

in the millions forced the simplification of many items and the increasing use of substitute materials in their manufacture. In this fully illustrated book noted authority Dr Stephen Bull examines the German Army's wide range of uniforms, personal equipment, weapons, medals and awards, and offers a comprehensive guide to the transformation that the German Army soldier underwent in the period from September 1939 to May 1945.

In the well-established aviation system, the importance of sound human factors practice, based on good aviation psychology research, is obvious from those incidents and accidents resulting from its neglect. This carefully structured book presents an up-to-date review of the main areas in the field of Aviation Psychology. It contains current thinking mainly from Europe, but with input from Australia and North America, from specialists involved in research, training and operational practice. Spanning six parts, the book covers: Human Engineering, Occupational Demands, Selection of Aviation Personnel, Human Factors Training, Clinical Psychology, Accident Investigation and Prevention. Looking at the six parts - in human engineering, the reader learns about human-centered automation as well as human factors issues in aircraft certification. Results derived by job analysis methods are presented in the next part and serve as basic information in the design of selection and training programs. In selection, computerized testing or behaviour-oriented assessments are challenging approaches for personnel recruitment. Cost-benefit analyses in selection reveal convincing results, enabling organizations to save huge amounts of inappropriate training investment by the application of proper selection tests. The NOTECHS method is described which helps to assess CRM capabilities in training and can also be used to measure training effects in systematic validation studies. Although operational personnel in aviation are usually able to cope with

stress more efficiently than other occupational groups, individual problems might develop as reactions to traumatic influences. Either a psychological evaluation or a proper treatment or both is then required as described in the 'Clinical Psychology' part of the book. The readership includes: aviation psychologists and flight surgeons, training, selection and recruitment specialists, instructor pilots, CRM facilitators, personnel managers, accident investigators, safety pilots, air traffic controllers, aircraft engineers and those dealing with human-machine interfaces.
